FAX: (315) 471-8146 • (800) 537-4213

Every time you shift your Muncie's heavy mainshaft assembly is thrown back and forth, restrained only by two snaprings and your midplate. Think of it as a slide-hammer and it'll be no surprise that many aluminum midplates are distorted at the snapping groove.

Our midplate is made from shock resistant iron (we say it's ductile but you might call it nodular — they're the same thing). It's standard in our new transmissions and available for your existing gearbox (order 18-672-001).

**We make
the midplate
you should be
hammering on.**
